this volume allows 13 besieged languages to tell their own stories by way of their consummate battles with languages that dominate their traditional spaces and ways of thinking it tells of the value of these languages through linkages with the past and present and where continuation of this might further share those values with wider audiences beyond the current language users as such the book captures a discourse on the existence of minority languages in countries and states where they are under threat by the governing language

this book explores interdisciplinary perspectives on socioecological challenges and offers innovative solutions at both a european and global level this book critically reflects on the latest scientific knowledge regarding the increasing instability of the earth system caused by human activities during the anthropocene and the great acceleration it focuses on the global and european challenges regarding climate resources bio integrity and environment the authors assess the obstacles to overcoming these challenges and examine the risks posed by path dependencies lock ins and trade offs between global and regional goals they also drill down into the complexities of the european green deal specifically the similarities and differences between the scientific analyses and recommendations from the european environment agency and the content of the deal finally the book looks at the just transition put forward by the european green deal the authors discuss this in a context of global and european ecological and socioecological challenges and put the question of equality recognition and democratization at the center outlining new pathways to broaden the scope of scientific collaboration between the natural and technical sciences and the social sciences and the humanities this volume will be of great interest to students and scholars of sustainable development environmental policy and governance and environmental justice

several of the key concepts of biopolitics have come under scrutiny since the outbreak of covid 19 pandemic this volume brings into discussion how biopolitics can

be conceptualized critically within a milieu of mass healing such as in india contributors to this volume discuss crucial themes like geropolitics and pandemic reflections on the question of old age borders and logistics in a world emerging from the pandemic immunization of humans and humanization of immunity thus defining the indian contexts of the biopolitical problematic extending its analysis into a retrospective vision of thought traditions and socio political underpinnings that shaped modernity and post coloniality in india it also explores the medico therapeutical discourse embedded in philosophy of medicine and philosophical modernity tracing its interstitial positioning as therapeutic assemblages in a milieu of mass healing this book will be useful for scholars and researchers of biopolitics philosophy political philosophy sociology science and technology studies medical sociology health and well being and cultural studies

multivariate analysis of the multi component analytical profiles of carefully collected biofluid and or tissue biopsy specimens can provide a fingerprint of their biomolecular metabolic status therefore if applied correctly valuable information regarding disease indicators disease strata and sub strata and disease activities can be obtained this exemplary new book highlights applications of these techniques in the areas of drug therapy and toxicology cancer obesity and diabetes as well as outlining applications to cardiovascular infectious inflammatory and oral diseases in detail the book gives particular reference to cautionary measures that must be applied to the diagnosis and classification of these conditions or physiological criteria comprehensively covering a wide range of topics of particular interest is the focus on experimental design and rights and wrongs of the techniques commonly applied by researchers and the very recent development of powerful pattern recognition techniques the book provides a detailed introduction to the area applications and common pitfalls of the techniques discussed before moving into detailed coverage of specific disease areas each highlighted in individual chapters this title will provide an invaluable resource to medicinal chemists biochemists and toxicologists working in industry and academia

there has been enormous progress in our understanding of molybdenum and tungsten

enzymes and relevant inorganic complexes of molybdenum and tungsten over the past twenty years this set of three books provides a timely and comprehensive overview of the field and documents the latest research the first volume in the set focusses on the enzymes themselves and discusses active sites and substrate channels of relevant proteins the book begins with an introductory overview of the whole field chapters are contributed by world leaders and topics covered include pyranopterin cofactor biosynthesis and incorporation of the mature cofactor into apoprotein subsequent volumes cover the bioinorganic chemistry relevant to these enzymes and the full range of spectroscopic and theoretical methods that are used to investigate their physical and electronic structure and function this text will be a valuable reference to workers both inside and outside the field including graduate students and young investigators interested in developing new research programs in this area

this book includes twenty one comprehensive chapters addressing various soil and crop management issues including modern techniques in enhancing crop production in the era of climate change there are a few case studies and experimental evidence about these production systems in specific locations particular focus is provided on the state of the art of biotechnology nanotechnology and precision agriculture as well as many other recent approaches in ensuring sustainable crop production this book is useful for undergraduate and graduate students teachers and researchers particularly in the fields of crop science soil science and agronomy

the purpose of this book is to assess the potential effects of biotechnological approaches particularly genetic modification on biodiversity and the environment all aspects of biodiversity such as ecological diversity species diversity and genetic diversity are considered higher organisms contain a specific set of linear dna molecules called chromosomes and a complete set of chromosomes in an organism comprises its genome the collection of traits displayed by any organism phenotype depends on the genes present in its genome genotype the appearance of any specific trait also will depend on many other factors including whether the gene s responsible

for the trait is are turned on expressed or off the specific cells within which the genes are expressed and how the genes their expression and the gene products interact with environmental factors the primary biotechnology which concerns us is that of genetic manipulation which has a direct impact on biodiversity at the genetic level by these manipulations novel genes or gene fragments can be introduced into organisms creating transgenics or existing genes within an organism can be altered transgenics are a major area of concern combining genes from different species to effectively create novel organisms current rates of disappearance of biological and cultural diversity in the world are unprecedented intensive resource exploitation due to social and economic factors has led to the destruction conversion or degradation of ecosystems reversing these trends requires time to time assessment to integrate conservation and development

what is economics missing link recent economic crises have had a devastating impact on society worryingly they gravely risked a collapse of the financial system these crises also painfully revealed economics blind spots crucially economics is not an innocent bystander but central to the problem in this pioneering book patrick schotanus explains that economics mechanical worldview is the ontological error which leads to flawed thinking and faulty practices the market mind hypothesis mmh thus calls it mechanical economics it not only erroneously views but also dangerously treats the economy as a machine the market as an automaton and its agents as robots inspired by heterodox economic and leading cognitive thinkers this book offers an alternative paradigm central to mmh s psychophysical worldview is the fact that consumers investors and other participants are conscious beings and that their minds extension makes consciousness a reality in markets exemplified by market mood specifically denial of the complex mind matter exchanges as the essence of markets means the extended mind body problem is economics elephant in the room the book argues that if mechanical economics is the answer we have been asking the wrong questions moreover we will not solve our economic predicaments by doubling down on the assumption of rationality nor by identifying yet another behavioural bias

instead scholars and students of economics and finance as well as finance practitioners need to investigate through cognitive economics the deep links between markets and minds to better understand both with a foreword by investment strategist russell napier an intermezzo by neuroscientist and complexity pioneer scott kelso and an afterword by 4e cognition philosopher julian kiverstein

the sage handbook of peace and conflict studies offers a comprehensive exploration of the complexities of violence conflict and peace from a global interdisciplinary perspective the handbook addresses the traditional western centric approach while emphasizing the need to integrate global south perspectives to create a more inclusive and transformative understanding of peace and conflict while important voices in peace and conflict studies have long stressed the need to not only address direct violence but also structural and cultural one certain strands of the field have upheld conservative knowledge production and reinforced unequal power structures this volume seeks to challenge these biasesby foregrounding critical and decolonial approaches that emphasize gender race culture global history and political economy its diverse chapters invite us to question mainstream assumptions and promote a broader more inclusive analysis of peace and conflict the handbook explores the evolution of the field highlighting the impact of historical events and the role of oppositional knowledge in political change it offers a critical overview of theoretical approaches emphasizing reflexivity inclusivity and the importance of local actors in peace and conflict dynamics additionally it examines how cultural and disciplinary assumptions shape peacebuilding and conflict transformation and it critiques traditional global narratives on issues like governance climate change and human rights finally the handbook presents real world case studies that integrate themes of decoloniality race gender and power inequalities across diverse global contexts by centering the global south and integrating interdisciplinary perspectives this handbook provides valuable insights for scholars and practitioners committed to fostering a more equitable and just world section 1 history knowledge and power in peace and conflict studies section 2 theory and analysis in peace and conflict studies section 3
