since the mid 80s several laboratories around the world have been developing techniques for the operational use of tests derived from item generation according to the experts the major thrust of test development in the next decade will be the harnessing of item generation technology to the production of computer developed tests this is expected to revolutionize the way in which tests are constructed and delivered this book is a compilation of the papers presented at a symposium held at ets in princeton attended by the world s foremost experts in item generation theory and practice its goal is to present the major applications of cognitive principles in the construction of ability aptitude and achievement tests it is an intellectual contribution to test development that is unique with great potential for changing the ways tests are generated the intended market includes professional educators and psychologists interested in test generation

themes play a central role in our everyday communication we have to know what a text is about in order to understand it intended meaning cannot be understood without some knowledge of the underlying theme this book helps to define the concept of themes in texts and how they are structured in language use much of the literature on thematics is scattered over different disciplines literature psychology linguistics cognitive science which this detailed collection pulls together in one coherent overview the result is a new landmark for the study and understanding of themes in their everyday manifestation

this book documents the speaking component of a test designed for immigrants to australia

this preface pertains to three issues that we would like to bring to the attention of the readers our objectives our intended audience and the nature of the material we have in mind several objectives the first is to establish a framework for dealing with uncertainties in software engineering and for using quantitative measures for decision making in this context the second is to bring into perspective the large body of work having statistical content that is relevant to software engineering which may not have appeared in the traditional outlets devoted to it connected with this second objective is a desire to streamline and organize our own thinking and work in this area our third objective is to provide a platform that facilitates an interface between computer scientists and statisticians to address a class of problems in computer science it appears that such an interface is necessary to provide the needed synergism for solving some

difficult problems that the subject poses our final objective is to serve as an agent for stimulating more cross disciplinary research in computer science and statistics to what extent the material here will meet our objectives can only be assessed with the passage of time our intended audience is computer scientists software engineers and reliability analysts who have some exposure to probability and statistics applied statisticians interested in reliability problems are also a segment of our intended audience
