relational data exchange is the problem of translating relational data according to a given specification it is one of the many tasks that arise in information integration a fundamental issue is how to answer queries that are posed against the result of the data exchange so that the answers are semantically consistent with the source data for monotonic queries the certain answers semantics by fagin kolaitis miller and popa 2003 yields

good answers for many non monotonic queries however this semantics was shown to yield counter intuitive answers this dissertation deals with the problem of computing the certain answers to monotonic queries on the one hand on the other hand it presents and compares semantics for answering non monotonic queries and investigates how hard it is to evaluate non monotonic queries under these semantics
