sustainable infrastructure development is vital for africa s prosperity and now is the time to begin the transformation this volume is the culmination of an unprecedented effort to document analyze and interpret the full extent of the challenge in developing sub saharan africa s infrastructure sectors as a result it represents the most comprehensive reference currently available on infrastructure in the region the book covers the five main economic infrastructure sectors information and communication technology irrigation power transport and water and sanitation africa s infrastructure a time for transformation reflects the collaboration of a wide array of african regional institutions and development partners under the auspices of the infrastructure consortium for africa it presents the findings of the africa infrastructure country diagnostic aidc a project launched following a commitment in 2005 by the international community after the g8 summit at gleneagles scotland to scale up financial support for infrastructure development in africa the lack of reliable information in this area made it difficult to evaluate the success of past interventions prioritize current allocations and provide benchmarks for measuring future progress hence the need for the aidc africa s infrastructure sectors lag well behind those of the rest of the world and the gap is widening some of the main policy relevant findings highlighted in the book include the following infrastructure in the region is exceptionally expensive with tariffs being many times higher than those found elsewhere inadequate and expensive infrastructure is retarding growth by 2 percentage points each year solving the problem will cost

over us 90 billion per year which is more than twice what is being spent in africa today however money alone is not the answer prudent policies wise management and sound maintenance can improve efficiency thereby stretching the infrastructure dollar there is the potential to recover an additional us 17 billion a year from within the existing infrastructure resource envelope simply by improving efficiency for example improved revenue collection and utility management could generate us 3 3 billion per year regional power trade could reduce annual costs by us 2 billion and deregulating the trucking industry could reduce freight costs by one half so raising more funds without also tackling inefficiencies would be like pouring water into a leaking bucket finally the power sector and fragile states represent particular challenges even if every efficiency in every infrastructure sector could be captured a substantial funding gap of 31 billion a year would remain nevertheless the african people and economies cannot wait any longer now is the time to begin the transformation to sustainable development

the subnational dimension of infrastructure has emerged as one of the greatest challenges in contemporary public finance policy and management ensuring the efficient provision of infrastructure represents a challenge for all countries irrespective of their level of centralization or decentralization this book proposes an innovative approach for the strengthening of decentralized public investment and infrastructure management decentralization and infrastructure in the global economy from gaps to solutions covers the most important aspects of infrastructure investment in a decentralized setting it discusses infrastructure gaps and the quality of subnational spending how functional responsibilities financing and equalization can be designed sector specific arrangements in high expenditure areas such as health education and roads key steps of the public investment cycle and management and analyses the political economy and corruption challenges that typically accompany decentralized infrastructure projects this book challenges some of the well accepted principles of intergovernmental fiscal relations and will be useful to researchers and practitioners of public finance policy and management

governments have long recognized the vital role that modern infrastructure services play in economic growth and poverty alleviation for much of the post second world war period most governments entrusted delivery of these services to state owned monopolies but in many developing countries the results were disappointing public sector monopolies were plagued by inefficiency many were strapped for resources because governments succumbed to populist pressures to hold prices below costs fiscal pressures and the success of the pioneers of the privatization of infrastructure services provided governments with a new paradigm many governments sought to involve the private sector in the provision and financing of infrastructure services the shift to the private provision that occurred during the 1990s was much more rapid and widespread than had been

anticipated at the start of the decade by 2001 developing countries had seen over 755 billion of investment flows in nearly 2500 infrastructure projects however these flows peaked in 1997 and have fallen more or less steadily ever since these declines have been accompanied by high profile cancellations or renegotiations of some projects a reduction in investor appetite for these activities and in some parts of the world a shift in public opinion against the private provision of infrastructure services the current sense of disillusionment stands in stark contrast to what should in retrospect be surprise at the spectacular growth of private infrastructure during the 1990s

for the people of the united states the 20th century was one of unprecedented population growth economic development and improved quality of life the critical infrastructure systems water wastewater power transportation and telecommunications built in the 20th century have become so much a part of modern life that they are taken for granted by 2030 60 million more americans will expect these systems to deliver essential services large segments and components of the nation s critical infrastructure systems are now 50 to 100 years old and their performance and condition are deteriorating improvements are clearly necessary however approaching infrastructure renewal by continuing to use the same processes practices technologies and materials that were developed in the 20th century will likely yield the same results increasing instances of service disruptions higher operating and repair costs and the possibility of catastrophic cascading failures if the nation is to meet some of the important challenges of the 21st century a new paradigm for the renewal of critical infrastructure systems is needed this book discusses the essential components of this new paradigm and outlines a framework to ensure that ongoing activities knowledge and technologies can be aligned and leveraged to help meet multiple national objectives

this book is designed to promote the development of infrastructure services in honduras with the aim of improving the country s competitiveness and contributing to poverty reduction its central argument is that honduras needs a significant increase in private investment in infrastructure services which should take place in more competitive environment and be subject to an adequate legal and regulatory framework the study details the progress to date in honduran infrastructure sectors identifying the principal problems that exist and outlining a strategy for their solution it proposes a general set of principles that should guide the provision of infrastructure services in addition it recommends specific policies for each sector the document s scope includes the following services transportation water and sanitation electricity and telecommunications
