this book discusses the topic of naturally occurring phorbol esters chapters include environmental hazards of diterpene esters from plants multi stage carcinogenesis and the biological effects of tumor promoters review of the family euphorbiaceae biosynthetic and chemosystematic aspects of the euphorbiacea and thymelaeaceae non diterpenoid constituents of euphorbiacea macrocyclic diterpenes of the family euphorbiacea phorbol its esters and derivatives the daphnane polyol esters the ingenane polyol esters and the biochemical mechanism of action of phorbol ester

growth regulation and carcinogenesis discusses topics such as growth factors including stimulators and inhibitors of proliferation networks in

proliferation regulation differentiation inducing factors origins of neoplasia and their relationship to growth control genetic alterations in cellular regulatory machinery extrachromosomal phenomena non genotoxic carcinogens immortalization and transformation of cells and the role of cell production cell function and cell elimination in physiological growth control

the endometrium differs from all other tissues of the body in that it rhythmically changes its structure and function for many years the meaning of these changes remained puzzling and obscure at about the turn of the century some investigators held the physiological fluctuations of the menstrual cycle to be inflammatory changes later when stricter criteria for the pathology of the endometrium were applied morphologists misinterpreted pathological fluctuations in the cycle either as physiological variations or they overlooked them entirely today as previously the pathologist is often confronted with the dilemma that he is unable to adequately diagnose the endometrium merely from the structural changes accordingly the gynecologist finds the pathological report of little value in like manner if the clinical information given the pathologist is incomplete then he cannot form a clear notion of the clinical problem although the detection of focal lesions of the endometrium is important of much greater consequence is the recognition of functional hormonally controlled variations and their cyclic course for it is from these that the clinician is guided in deciding what therapy he should use the ability to detect such functional changes requires not only that the morphologist possess a thorough knowledge of the physiological and pathological anatomy of the endometrium but also that he receive exact information about the patient's menstrual history and have in sight into clinical problems
