in the ever growing world of technology it is becoming more important to understand the developments of new electronic services and mobile applications innovative mobile platform developments for electronic services design and delivery is a comprehensive look at all aspects of production management delivery

and consumption of e services self services and mobile communication including business to business business to consumer government to business government to consumer and consumer to consumer e services this volume is perfect for the interest of professionals academic educators researchers and industry consultants by providing the latest interdisciplinary research as a new platform for learning and research dissemination

this book constitutes the thoroughly refereed post conference proceedings of the 9th international workshop on agent mediated electronic commerce amec ix co located with the sixth international joint conference on autonomous agents and multiagent systems aamas 2007 held in honolulu hawaii in may 2007 and the 5th workshop on trading agent design and analysis tada 2007 co located with the twenty second aaai conference on artificial intelligence aaai 2007 held in vancouver canada in july 2007 this volume presents 15 carefully revised and selected papers from these workshops the primary and complementary goal of both workshops was to continue to bring together novel work from diverse fields on modeling implementation and evaluation of computational trading institutions and or agent strategies the papers originating from amec focus on a large variety of issues on auctions negotiation and strategic behavior in electronic marketplaces the papers originating from tada reflect the effort of the community to design scenarios where trading agent designers and market designers can be pitched against one another

plants use the sun s energy to synthesize the basic biomolecules that make up all the organic matter of all organisms of terrestrial ecosystems including ourselves therefore understanding their adaptive mechanisms to variations of environmental factors both biotic and abiotic is fundamental and particularly relevant in the current context of rapid climate change some of the most important adaptive mechanisms of plants are the electrical and chemical signaling systems for the exchange of information between proximally and distally located cells these signalling systems allow plants to dynamically coordinate the activities of all cells under a diversity of situations in this research topic we present eight articles that bring up new hypothesis and data to understand the mechanisms of systemic electrical signaling and the central role that it plays in adapting the whole plant to different stresses as well as new findings on intracellular calcium and nitric oxide based signaling pathways under stress which could be extrapolated to non plant research

defects in advanced electronic materials and novel low dimensional structures provides a comprehensive review on the recent progress in solving defect issues and deliberate defect engineering in novel material systems it begins with an overview of point defects in zno and group iii nitrides including irradiation induced defects and then look at defects in one and two dimensional materials including

carbon nanotubes and graphene next it examines the ways that defects can expand the potential applications of semiconductors such as energy upconversion and quantum processing the book concludes with a look at the latest advances in theory while defect physics is extensively reviewed for conventional bulk semiconductors the same is far from being true for novel material systems such as low dimensional 1d and 0d nanostructures and 2d monolayers this book fills that necessary gap presents an in depth overview of both conventional bulk semiconductors and low dimensional novel material systems such as 1d structures and 2d monolayers addresses a range of defects in a variety of systems providing a comparative approach includes sections on advances in theory that provide insights on where this body of research might lead

this book is dedicated to the field of conductive polymers focusing on electrical interactions with biological systems it addresses the use of conductive polymers as the conducting interface for electrical communications with the biological system both in vitro and in vivo it provides an overview on the chemistry and physics of conductive polymers their useful characteristics as well as limitations and technologies that apply conductive polymers for medical purposes this groundbreaking resource addresses cytotoxicity and tissue compatibility of conductive polymers the basics on electromagnetic fields and commonly used experimental methods readers will also learn how cells are cultured in vitro with conductive polymers and how conductive polymers and living tissues interact electrically throughout the contents chapter authors emphasize the importance of conductive polymers in biomedical engineering and their potential applications in medicine

handbook of organic materials for electronic and photonic devices second edition provides an overview of the materials mechanisms characterization techniques structure property relationships and most promising applications of organic materials this new release includes new content on emerging organic materials expanded content on the basic physics behind electronic properties and new chapters on organic photonics as advances in organic materials design fabrication and processing that enabled charge unprecedented carrier mobilities and power conversion efficiencies have made dramatic advances since the first edition this latest release presents a necessary understanding of the underlying physics that enabled novel material design and improved organic device design provides a comprehensive overview of the materials mechanisms characterization techniques and structure property relationships of organic electronic and photonic materials reviews key applications including organic solar cells light emitting diodes electrochemical cells sensors transistors bioelectronics and memory devices new content to reflect latest advances in our understanding of underlying physics to enable material design and device fabrication
