most coding theory experts date the origin of the subject with the 1948 publication of a mathematical theory of communication by Claude Shannon since then coding theory has

grown into a discipline with many practical applications antennas networks memories requiring various mathematical techniques from commutative algebra to semi definite programming to algebraic geometry most topics covered in the concise encyclopedia of coding theory are presented in short sections at an introductory level and progress from basic to advanced level with definitions examples and many references the book is divided into three parts part i fundamentals cyclic codes skew cyclic codes quasi cyclic codes self dual codes codes and designs codes over rings convolutional codes performance bounds part ii families ag codes group algebra codes few weight codes boolean function codes codes over graphs part iii applications alternative metrics algorithmic techniques interpolation decoding pseudo random sequences lattices quantum coding space time codes network coding distributed storage secret sharing and code based cryptography features suitable for students and researchers in a wide range of mathematical disciplines contains many examples and references most topics take the reader to the frontiers of research

this book constitutes the proceedings of the 9th international conference on latent variable analysis and signal separation Iva ica 2010 held in st malo france in september 2010 the 25 papers presented were carefully reviewed and selected from over hundred submissions the papers collected in this volume demonstrate that the research activity in the field continues to gather theoreticians and practitioners with contributions ranging range from abstract concepts to the most concrete and applicable questions and considerations speech and audio as well as biomedical applications continue to carry the mass of the considered applications unsurprisingly the concepts of sparsity and non negativity as well as tensor decompositions have become predominant reflecting the strong activity on these themes in signal and image processing at large

the so called hard or exact sciences with their necessary emphasis on technology and on the technical are hardly reputed for being very human and conversely the so called human sciences are often pronounced as soft because they cannot be based on the certainties associated with the former the search for truth which is the essential dimension of the construction of a peaceful world therefore has to navigate between considerations of a

philosophical nature and the concrete data of the hard sciences if ever since the humanism of the renaissance period we have been happy to lay claim to the wisdom of one of its great writers rabelais who taught a moral lesson to the young pantagruel with the neat formula science without conscience is the ruin of the soul we nonetheless stand in awe before modern scientific advances and the extraordinary achievements that they have opened up if everything is not permissible at least everything seems possible

it can be easy to forget the critical role that maritime transport plays in the global economy but international maritime transportation is still responsible for around 90 of global trade protecting the maritime infrastructure essential for this trade from terrorism is a major concern for the international community this book originates from the nato advanced research workshop arw counter terrorism lessons from maritime piracy and narcotics interdiction held in copenhagen denmark in may 2019 participants in the three day workshop included policymakers senior military officers and academics from nato member states international organizations and two partner nations colombia and israel their extensive discussions focused on methods for protecting critical maritime infrastructure such as ports supplies and personnel from seaborne terrorist attacks presentations and roundtables also addressed the human and social factors that contribute to the defense against terrorism in the maritime domain the book is divided into three sections organized crime and narcotrafficking maritime piracy and terrorism and aims to bridge the gaps between these three substantive areas of maritime security research these have remained largely separate areas of research in the past with the result that valuable maritime security lessons from counter piracy and counter narcotics operations have not been fully incorporated into counter terrorism best practice the book facilitates the transmission of lessons learned from counter piracy and counter narcotic operations to formulate recommendations for best practice and technological innovations to manage maritime terrorism and will be of interest to all those working in the field

the war in ukraine has captivated the world current coverage is emotional and largely limited to the military aspects of the war contributions from peace and conflict studies have been under represented in the current debate they are even subject to anti pacifist criticism the question of what is needed for a lasting peace is hardly addressed this question is all the more important as this war has a highly explosive global dimension in its depth with indirect links to other territorial conflicts such as the china taiwan conflict in parallel with the war there is a growing global bloc between east and west and since donald trump took office in january 2025 an internal split in the west with an uncertain outcome some observers speak of a new cold war with the two superpowers the us and china and the eu and russia as the main players at the same time the war seems to be acting as a catalyst for a new multilateral world order the book outlines in a concise and generally understandable form how a multidimensional analysis of complex conflicts such as the russia ukraine war can be approached and how approaches to conflict intervention and foreign policy can be derived from this complexity it also provides impetus for the further development of peace studies into a multi paradigmatic field of research

signal processing plays an increasingly central role in the development of modern

telecommunication and information processing systems with a wide range of applications in areas such as multimedia technology audio visual signal processing cellular mobile communication radar systems and financial data forecasting the theory and application of signal processing deals with the identification modelling and utilisation of patterns and structures in a signal process the observation signals are often distorted incomplete and noisy and hence noise reduction and the removal of channel distortion is an important part of a signal processing system advanced digital signal processing and noise reduction third edition provides a fully updated and structured presentation of the theory and applications of statistical signal processing and noise reduction methods noise is the eternal bane of communications engineers who are always striving to find new ways to improve the signal to noise ratio in communications systems and this resource will help them with this task features two new chapters on noise distortion and diversity in mobile environments and noise reduction methods for speech enhancement over noisy mobile devices topics discussed include probability theory bayesian estimation and classification hidden markov models adaptive filters multi band linear prediction spectral estimation and impulsive and transient noise removal explores practical solutions to interpolation of missing signals echo cancellation impulsive and transient noise removal channel equalisation hmm based signal and noise decomposition this is an invaluable text for senior undergraduates postgraduates and researchers in the fields of digital signal processing telecommunications and statistical data analysis it will also appeal to engineers in telecommunications and audio and signal processing industries

the second revised edition of this book was suggested by the impressive sales of the first edition fortunately this enabled us to incorporate new important results that had just been obtained the assom adaptive subspace som is a new architecture in which invariant feature detectors emerge in an unsupervised learning process its basic principle was already introduced in the first edition but the motivation and theoretical discussion in the second edition is more thorough and consequent new material has been added to sect 5 9 and this section has been rewritten totally correspondingly sect 1 4 which deals with adaptive subspace classifiers in general and constitutes the prerequisite for the assom principle has also been extended and rewritten totally another new som development is the websom a two layer architecture intended for the organization of very large collections of full text documents such as those found in the internet and world wide this architecture was published after the first edition came out the idea and results seemed to be so important that the new sect 7 8 has now been added to the second edition another addition that contains new results is sect 3 15 which describes the acceleration in the computing of very large soms it was also felt that chap 7 which deals with 80m applications had to be extended
