this volume presents essays by pioneering thinkers including tyler burge gregory chaitin daniel dennett barry mazur nicholas humphrey john searle and ian stewart together they illuminate the map territory distinction that underlies at the foundation of the scientific method thought and the very reality itself it is imperative to distinguish map from the territory while analyzing any subject but we often mistake map for the territory meaning for the reference computational tool for what it computes representations are handy and tempting that we often end up committing the category error of over marrying the representation with what is represented so much so that the distinction between the former and the latter is lost this error that has its roots in the pedagogy often generates a plethora of paradoxes confusions which hinder the proper understanding of the subject what are wave functions fields forces numbers sets classes operators functions alphabets and sentences are they a part of our map theory representation or do they actually belong to the territory reality researcher like a cartographer clothes or creates the reality by stitching multitudes of maps that simultaneously co exist a simple apple for example can be analyzed from several viewpoints beginning with evolution and biology all the way down its microscopic quantum mechanical components is there a reality or a real apple out there apart from these maps how do these various maps interact intermingle with each other to produce a coherent reality that we interact with or do they not does our brain uses its own internal maps to facilitate physicist mathematician in us to construct the maps about the external territories in turn if so what is the nature of these internal maps are there meta maps evolution definitely fences our perception and thereby our ability to construct maps revealing to us only those aspects beneficial for our survival but the question is to what extent is there a way out of the metaphorical platonic cave erected around us by the nature while map is not the territory as alfred korzybski remarked join us in this journey to know more while we inquire on the nature and the reality of the maps which try to map the reality out there the book also includes a foreword by sir roger penrose and an afterword by dagfinn follesdal

this innovative study of the role of competition law in the telecommunications industry starts from a classic perspective while in principle regulation benefits social welfare and efficient allocation of resources past regulatory experience shows that regulation can be flawed and lead to welfare harm rather than good in the telecommunications industry specifically inappropriately designed sector specific remedies and regulatory delays in the introduction of new telecommunications

services can hold up the development of the market towards effective competition and could incur considerable welfare losses in addition conventional antitrust analysis still lags behind the dynamic nature of the electronic communications markets milena stoyanova sets out to establish a new understanding of the role of sector specific regulation and competition law enforcement in the electronic communications sector addressing such questions as the following and why a new regulatory framework and are sectoral regulation and competition law enforcement mutually exclusive or complementary and why should electronic communications markets be regulated to conform to competition law principles and what does competition law add to sector specific regulation and what is the relationship or proportion between regulation and competition law enforcement an overview of the telecommunications liberalization process initiated at european community level reveals such problems as a divergent approach of national regulatory authorities in the application of one and the same norms inability of competition authorities to rightly assess the technicalities underlying a competition problem and difficulty in carrying out a periodical oversight of compliance with the competition law remedies the author discusses the legal basis and rationale for the application of the essential facility doctrine to the electronic communications sector and argues for new regulatory responses to the emergence of collective dominant firms in an oligopolistic setting and to the potential of multifirm conduct to restrict competition through price squeezing and other tactics the book concludes with a specific case study on the harmonisation of recent bulgarian legislation with the european community sector specific and competition law regimes andà propos the electronic communications sector effective competition in the electronic communications market is crucial for securing the dynamic role of the entire information and communications technologies sector of which electronic communications form the largest segment the sound and well informed recommendations in this book ably address common and persistent problems making competition problems in liberalized telecommunications a forward looking mainstay for practitioners and other professionals involved in all aspects of the field

research into the field of stem cell biology has developed exponentially over recent years and is beginning to offer significant promise for unravelling the molecular basis of a multitude of disease states importantly in addition to offering the opportunity to delve deeply into the mechanisms that drive disease aetiology the research is realistically opening the doors for development of targeted and personalized therapeutic applications that many considered until recently to be nothing more than a far fetched dream this volume provides a timely glimpse into the methods that have been developed to instigate and the mechanisms that have been identified to drive the process of nuclear reprogramming chronicling how the field has developed over the last 50 60 years since the early 1950s a small number of notable experiments have provided significant impetus to the field primarily the demonstration of reprogramming ability first by the complex cytoplasmic milieu that constitutes the amphibian egg then that of the mammalian egg and finally that of the mammalian embryonic stem cell most recently the demonstration that a limited pool of defined molecules is capable of reprogramming a multitude of cell types has provided massive impetus and facilitated transition towards realistic therapeutic application we have therefore reproduced some of the key articles that elegantly document these dramatic stages of development of the field in an inclusive appendix to the book for the benefit of readers keen to investigate the history of how the field of stem cell biology has evolved owing to the ever broadening nature of this field and the

incredible rate at which it is evolving the main content of this volume focuses on areas that have shown significant movement in recent years are most likely to translate into personalized therapeutic application and thus provide greatest potential for significant impact on human health in the not too distant future we recognize that research into many other disease states and cell types are all equally worthy of discussion we would therefore like to acknowledge those researchers involved whose work we have not been able to include in this volume nuclear reprogramming and stem cells will serve as a valuable resource for all researchers in the field of stem cell biology including those just setting out on their career path as well as those already established in the field
