academic paper from the year 2017 in the subject medicine neurology psychiatry addiction grade 2 egerton university language english abstract it appears that the field of psychology is becoming extremely fascinating day by day owing to the sophistication of newly designed psychology approaches and research advancement it is evidently true that the discipline of psychology has undergone transient evolution since its inception and further developments are inevitable because psychological research is currently widening to incorporate different perspective which were not studied in psychology in the past initially psychology emerged as one of the classical disciplines of science but it has advanced significantly especially after psychologists established the new branch of applied psychology whose application is gaining popularity currently psychology does not only entail the social aspect of the human mind but it also involves biological perspective and this has led to the emergence of biopsychology and cognitive psychology however it is worth noting that there are different approaches of psychology but behaviourist approach seems to explain the interaction of the human mind and the environment therefore this essay will provide a comprehensive description of the behavioural approach and evaluate its strengths and limitations

the most useful therapy is one that can be applied to a wide range of client problems is easy to learn and produces lasting results following a brief intervention the cognitive behavioural approaches described in this volume probably come nearest to this ideal originally published in 1989 this book begins with a description of the cognitive behavioural revolution that had taken place in the decade prior to publication and provides therapists with the specifics of helping in four major areas child behaviour problems emotional disorders depression and anxiety interpersonal problems and addictive disorders coverage of the major areas of concern begins in each case with an overview of theory and research in the specific domain followed by detailed guidance for practice the volume represents a synthesis of the author s research and practice with patients in inner city liverpool and with employees referred by major employers the strategies described have been devised to take account of a wide variety of client social contexts and service delivery settings and the strengths pitfalls and practicalities of group cognitive behavioural approaches are also discussed the reader is finally led into largely uncharted waters the application of cognitive behavioural approaches to schizophrenia people with learning difficulties and the elderly back in print this title will still be of interest to students and practitioners in social work clinical psychology and community psychiatry

this book expands upon a range of economic insights within the overall context of critical theory particularly with respect to the question of socioeconomic inequalities and presents an explanation of how critical theory provides a number of interesting perspectives for economists economic agents deliberately imprisoned in their instrumental rationality as a means to survive under competitive relationships are microscopic constituents of

systemic forces which exist beyond their will despite the subjective rationality of such agents in terms of formally logical transitivity and consistency aggregate market distributional mechanisms also display non rational patterns the crucial aspect of the dynamics of this system consists of the paralysing effect of the high level of socioeconomic inequality which is driven by a permanent struggle for self preservation under competitive rules it is a reminiscence of natural uncivilised relationships that constituted the reproduction process of the whole these reified agents thus become instruments of their socially constructed powers on the one hand and objects of their existential conditionality on the other hence the dialectical approach adopted by the author aims to uncover the way in which structurally genetic market forces govern individual behaviour as well as how individual behaviour shapes these structurally genetic forces which together form the transcending principles of unequal distribution this book will be of particular interest to scholars of the political economy philosophy and the methodology of the social sciences especially those concerned with inequality issues this book includes a preface written by professor martin jay
