behavioral science in the wild helps practitioners understand how to use insights from the

behavioral sciences to create change in the real world

this book explores the main assumptions upon which behavioural science theories are based offers alternatives and challenges the reader to serious critical thought

presents papers which were discussed at the arden house conference a conference held to establish a working relationship between sociologists at the russell sage foundation and journalists of the graduate school of journalism of columbia university both behavioral science and journalism have for a long time been concerned with some of the same major national social problems juvenile delinquency urban problems race and minority group relations international tensions and labor relations these papers touch on some of the barriers to communication and point to possible ways of breaking through those barriers

in arguably the finest text ever written in the philosophy of social science abraham kaplan emphasizes what unites the behavioral sciences more than what distinguishes them from one another kaplan avoids the bitter disputes among people doing methodology claiming instead that what is important are those qualities intrinsic to the overall aspirations of the social sciences he deals with special problems of various disciplines only so far as may be helpful in clarifying the general method of inquiry the conduct of inquiry is a systematic rounded and wide ranging inquiry into behavioral science kaplan is guided by the experience of sciences with longer histories but he is bound neither to their problems nor to their solutions instead he addresses the methodology of behavioral science in the broad sense of both method and science the work is not a formal exercise in the philosophy of science but rather a critical and constructive assessment of the developing standards and strategies of contemporary social inquiry he emphasizes the tasks achievements limitations and dilemmas of the newer disciplines philosophers of science usually choose to write about the most fully developed sciences because problems are clearer there the result is ordinarily of little benefit to the behavioral scientist whose task is clarification of method here the precedents and analogies of physical science are obscure or inappropriate the conduct of inquiry goes a long way in drawing upon the strengths of social research insights without simplifying the common concerns of the scientific enterprise as a whole as leonard broom noted when the book initially appeared kaplan fills a gap and does so with admirable clarity and often engaging wit it lacks pomposity pedantry and pretension and it is bound to make an impact on the teaching of and with luck research in the behavioral sciences

our ability to observe and forecast severe weather events has improved markedly over the past few decades forecasts of snow and ice storms hurricanes and storm surge extreme heat and other severe weather events are made with greater accuracy geographic specificity and lead time to allow people and communities to take appropriate protective measures yet hazardous weather continues to cause loss of life and result in other preventable social costs there is growing recognition that a host of social and behavioral factors affect how we prepare for observe predict respond to and are impacted by weather hazards for example an individual s response to a severe weather event may depend on their understanding of the forecast prior experience with severe weather concerns about their other family members or property their capacity to take the recommended protective actions and numerous other factors indeed it is these factors that can determine whether or not a potential hazard becomes an actual disaster thus it is essential to bring to bear expertise in the social and

behavioral sciences sbs â including disciplines such as anthropology communication demography economics geography political science psychology and sociologyâ to understand how people s knowledge experiences perceptions and attitudes shape their responses to weather risks and to understand how human cognitive and social dynamics affect the forecast process itself integrating social and behavioral sciences within the weather enterprise explores and provides guidance on the challenges of integrating social and behavioral sciences within the weather enterprise it assesses current sbs activities describes the potential value of improved integration of sbs and barriers that impede this integration develops a research agenda and identifies infrastructural and institutional arrangements for successfully pursuing sbs weather research and the transfer of relevant findings to operational settings
