this book highlights the efforts made by distinguished scientific researchers world wide to meet two key challenges i the limited reserves of polluting fossil fuels and ii the ever increasing amounts of waste being generated these case studies have brought to the foreground certain innovative biological solutions to real life problems we now face on a global scale environmental pollution and its role in deteriorating human health the book also highlights major advances in microbial metabolisms which can be used to produce bioenergy biopolymers bioactive molecules enzymes etc around the world countries like china germany france sweden and the us are now implementing major national programs for the production of biofuels the book provides information on how to meet the chief technical challenges identifying an industrially robust microbe and cheap raw material as feed of the various possibilities for generating bioenergy the most attractive is the microbial production of biohydrogen which has recently gained significant recognition worldwide due to its high efficiency and eco friendly nature further the book highlights factors that can make these bioprocesses more economical especially the cost of the feed the anaerobic digestion ad process is more advantageous in comparison to aerobic processes for stabilizing biowastes and producing biofuels hydrogen biodiesel 1 3 propanediol methane electricity biopolymers polyhydroxyalkanoates cellulose exopolysaccharides and bioactive molecules such as enzymes volatile fatty acids sugars toxins etc for biotechnological and medical applications information is provided on how the advent of molecular biological techniques can provide greater insights into novel microbial lineages bioinformatic tools and metagenomic techniques have extended the limits to which these biological processes can be exploited to improve human welfare a new dimension to these scientific works has been added by the emergence of synthetic biology the big question is how can these microbial factories be improved through metabolic engineering and what cost targets need to be met
