this book presents recent research on probabilistic methods in economics from machine learning to statistical analysis economics is a very important and at the same a very difficult discipline it is not easy to predict how an economy will evolve or to identify the measures needed to make an economy prosper one of the main

reasons for this is the high level of uncertainty different difficult to predict events can influence the future economic behavior to make good predictions and reasonable recommendations this uncertainty has to be taken into account in the past most related research results were based on using traditional techniques from probability and statistics such as p value based hypothesis testing these techniques led to numerous successful applications but in the last decades several examples have emerged showing that these techniques often lead to unreliable and inaccurate predictions it is therefore necessary to come up with new techniques for processing the corresponding uncertainty that go beyond the traditional probabilistic techniques this book focuses on such techniques their economic applications and the remaining challenges presenting both related theoretical developments and their practical applications

should historical injustices always be repaired upon scrutinising public institutions and present holdings it becomes evident that many are partially the result of past injustices consequently the imperative to rectify and repair historical injustices emerges however as circumstances change over time and these changes affect justice the argument for repairing historical injustices becomes more intricate the distributive and reparative aspects of justice may be in tension with each other possible tensions between these aspects of justice are assessed by discussing the thesis about the supersession of historical injustices different facets of the supersession thesis are evaluated in two contexts the first context explored in the initial part of the book examines whether and if so under what conditions post colonial injustices against 19th century latin american indigenous peoples should be repaired the second context explored later in the book assesses how climate burdens should be distributed globally and how to respond to potential injustices arising from departures from a fair climate transition towards net zero co2 emissions societies the book demonstrates that repairing historical injustices is compatible with the imperatives of distributive justice
