ukray unified field theory a new unification theory on electromagnetic gravitation preface this study which aims to prove that all forces and laws of physics exist in a single unified structure at the starting and ending moment of the universe analyzes all laws of physics within the framework of a unified structure from newton mechanics to quantum theory einstein relativity to modern 11 dimensional super string theory the study may also be considered as a modern era principia since it was started to be written in about 300 years early 2007 after the publication of the great study of newton named principia 1703 1707 on the topic of gravity theories the volume includes seven chapters in the form of seven different articles which follow each other and make clear the subject when they are read consecutively in addition four additional chapters in the form of appendixes in nature of fundamentals of mathematics were also included at the end of the volume for readers who have a less degree of technical knowledge about the topic this theory gets these questions into a change into gravitational field and field equations static and universal gravitational constants the dynamics of gravitational field with combining the electromagnetics theory the velocity of light could be exceeded this theory was prepared as a consequence of approximately 16 years

study whole 666 page includes about 100 theorems and 1000 illustrated drawings asserts the new physics of the universe and much more this oriented me to a series of researches to study and create this theory for years and then directed me to create a unified electromagnetic gravity theory composed of seven articles in total i will submit here in order and step by step even though the theory includes a deductive mathematical approach tensor calculation and geometric modellings i will give solutions of einstein maxwell equations with a different mathematical 4x4 pauli dirac spinors and tensor calculation construction in direction of closed extra dimension of the space 5 dimension effect what does the theory tell short abstract and philosophy of the theory the theory summarizes the general and simple mathematical description of the universe in the form of general conclusion items and forecasts the followings basic projections of the theory new model of an atom new model of the universe change in galileo inertia principle a fundamental change in the structure of maxwell s equations an additional terms and additions a change in poynting energy theory a new atomic model a new universe model change in galileo s principle of inertia a fundemental change and an additional term in the structure if maxwell equations a change in static field equations of the gravity field and in the universal gravity constant change in poynting energy theorem how can the velocity of light be exceeded

the rise and fall of the cold war coincided with the universalization and consolidation of the modern nation state as the key unit of the wider international system a key characteristic of the post cold war era in which the us has emerged as the sole superpower is the growing number of collapsing or collapsed states a growing number of states are or have become mired in conflict or civil war the antecedents of which are often to be found in the late colonial and cold war era at the same time us foreign policy and the actions of other organizations such as the united nations may well be compounding state failure in the context of the post 9 11 global war on terror gwot or what is also increasingly referred to as the long war the long war is often represented as a new era in warfare and geopolitics this book acknowledges that the long war is new in important respects but it also emphasizes that the long war bears many similarities to the cold war a key similarity is the way in which insurgency and counterinsurgency were and continue to be seen primarily in the context of inter state rivalry in which the critical local or regional dynamics of revolution and counter revolution are marginalized or neglected in this context american policy makers and their allies have again erroneously applied a grand strategy that suits the imperatives of conventional military and geo political thinking rather than engaging with what are a much more variegated array of problems facing the changing global order

this book provides a collection of well integrated studies that shed light on the history and future of insurgency counterinsurgency and collapsing states in the context of the long war this book was previously published as a special issue of third world quarterly

mysterious number system that seems to come out of the blue it is important for students to see that this is really a very concrete set of objects that has very concrete and meaningful applications features this new edition is a substantial rewrite focusing on the accessibility applied and visual aspect of complex analysis this book has an exceptionally large number of examples and a large number of figures the topic is presented as a natural outgrowth of the calculus it is not a new language or a new way of thinking incisive applications appear throughout the book partial differential equations are used as a unifying theme
