hallucinations a natural phenomenon as old as mankind have a surprisingly wide range they appear under the most diversified conditions in the normal psyche as well as in severe chronic mental derangement as a symptom hallucinations are a potential part of a variety of pathological conditions in almost all kinds of psychotic behavior in addition lately various psychological and sociological circumstances seem to favor widespread use and abuse of hallucinogens substances able to produce hallucinations in the normal brain they not rarely lead to serious psychopathology such as toxic and mobilized or aggravated endogenous psychoses while such development adds to our scientific knowledge it also contributes to our current social troubles neurologists and neurosurgeons psychiatrists psychologists and other specialized researchers constantly have been dealing with the phenomenon its roots and branches and yet its primary

mechanisms are largely unknown however investigators of hallucinations now seem to enter common ground on which meaningful discussions and joint approaches become feasible and more promising we have come a long way from the latin term *hallucinari* meaning to talk nonsense to be absent minded to the modern concept of hallucinations while the latin word was descriptive of what may be due to hallucinations the modern concept defines hallucinations as subjective experiences that are consequences of mental processes sometimes fulfilling a purpose in the individual's mental life

have you ever seen something that wasn't really there heard someone call your name in an empty house sensed someone following you and turned around to find nothing hallucinations don't belong wholly to the insane much more commonly they are linked to sensory deprivation intoxication illness or injury in some conditions hallucinations can lead to religious epiphanies or even the feeling of leaving one's own body humans have always sought such life changing visions and for thousands of years have used hallucinogenic compounds to achieve them in hallucinations with his usual elegance curiosity and compassion dr oliver sacks weaves together stories of his patients and of his own mind altering experiences to illuminate what hallucinations tell us about the organization and structure of our brains how they have influenced every culture's folklore and art and why the potential for hallucination is present in us all a vital part of the human condition

the dictionary of hallucinations second edition is an alphabetical listing of issues pertaining to hallucinations and other misperceptions they can be roughly divided into four categories 1 definitions of individual hallucinatory symptoms 2 medical conditions and substances associated with the mediation of hallucinations 3 historical figures who are known to have experienced hallucinations 4 miscellaneous issues each of the definitions of individual hallucinatory symptoms includes a definition of the term its etymological origin the year of introduction if known a reference to the author or authors who introduced the term if known a description of the current use a brief explanation of the etiology and pathophysiology of the symptom at hand if known references to related terms references to the literature the second edition of a dictionary of hallucinations serves as a reference manual for neuroscientists psychiatrists psychiatric residents psychologists neurologists historians of psychiatry general practitioners and academics dealing professionally with concepts of hallucinations and other sensory deceptions this new edition provides updated information and references and includes newly discovered hallucinations bringing together contributions by other authorities within the field with all the entries edited by prof blom

models of madness shows that hallucinations and delusions are understandable reactions to life events and circumstances rather than symptoms of a supposed genetic predisposition or biological disturbance international contributors critique the medical model of madness examine the dominance of the illness approach to understanding madness from historical and economic perspectives document the role of drug companies outline the alternative to drug based solutions identify the urgency and possibility of prevention of madness models of madness promotes a more humane and effective response to treating severely distressed people that will prove essential reading for psychiatrists and clinical psychologists and of great interest to all those who work in the

mental health service this book forms part of the international society for the psychological treatment of psychoses series edited by brian martindale

this book is the most practical clinical guide on acceptance and commitment therapy act said as one word not as initials yet available it is designed to show how the act model and techniques apply to various disorders settings and delivery options the authors of these chapters are experts in applying act in these various areas and it is intriguing how the same core principles of act are given a nip here and a tuck there to fit it to so many issues the purpose of this book in part is to embolden researchers and clinicians to begin to apply act wherever it seems to fit the chapters in the book demonstrate that act may be a useful treatment approach for a very wide range of clinical problems already there are controlled data in many of these areas and soon that database will be much larger the theory underlying act relational frame theory or rft and yes here you say the initials makes a powerful claim psychopathology is to a significant degree built into human language further it suggests ways to diminish destructive language based functions and ways of augmenting helpful ones to the extent that this model is correct act should apply to a very wide variety of behavioral issues because of the centrality of language and cognition in human functioning

at the start of the apocalypse a small resort town on the coast of rhode island fortified itself to withstand the millions of flesh eating zombies conquering the world with its high walls and self contained power plant eastpointe was a safe haven for the lucky few who managed to arrive trained specifically to outmaneuver the undead black berets performed scavenging missions in outlying towns in order to stock eastpointe with materials vital for long term survival but the town leaders took the black berets for granted on a whim sending them out into the cannibalistic wilderness most did not survive now the most cunning most brutal most efficient black beret will return to eastpointe after narrowly surviving the doomed mission and unleash his anger upon the town in one bloody night of retribution after twilight when the morning comes and the sun rises will anyone be left alive

there has been a recent surge of interest in auditory hallucinations ah in schizophrenia compared to those experienced by non clinical i.e. healthy individuals this interest stems in no small part from a keen awareness of the fact that progress in developing more effective treatments for ah in psychosis has been seriously hampered by our limited understanding of the cognitive and biological mechanisms involved the prevailing notion that ah in clinical and non clinical populations share the same features and underlying mechanisms the continuum hypothesis has been seriously challenged by a growing list of differences as well as similarities between these groups at the phenomenological level this is exemplified in the highly negative content of ah in patients and the markedly earlier age of onset of ah in non patients similarly several recent studies point to significant differences in cognition language lateralization and possibly dopamine function between these groups these findings have important implications for the design of future studies and raise considerable doubt about the adequacy of modelling the functional mechanisms of clinical ah on the basis of non clinical populations in short the time seems ripe to re evaluate the continuum hypothesis and provide a forum to present alternative perspectives on the functional pathways leading to ah in clinical and non

clinical groups such a forum is also timely in view of the renewed interest in ah in other non schizophrenic clinical groups again examining similarities and differences between such groups preliminary studies for instance have shown that ah in certain clinical populations e g bipolar disorder borderline personality disorder dissociative disorder share similar phenomenological features with ah in schizophrenia however the implications of such findings are not fully understood and studies have not adequately examined potential differences between ah in these groups the goal of this frontiers research topic therefore is take the opportunity to bring together research exploring differences and similarities in mechanisms of ah in clinical and non clinical groups and to stimulate the development of new explanatory models which explicitly link the phenomenological characteristics of ah with underlying mechanisms

the semblance hypothesis explains how associative memory can result from the multidimensional semblance of activity from a specific set of presynaptic terminals at different orders of neurons the hypothesized basic units are then examined for their feasibility to explain various physiological and pathological conditions of the nervous system ranging from physiological time scales of memory retrieval to plausible explanation for long term potentiation ltp
