earthworms are the most important members of the soil detritivore community and function as soil engineers because of their effects on soil properties and their influence on the availability of resources for other organisms including microorganisms and plants soil productivity and plant growth are strongly affected by biological activities of earthworms they act on soil structures through creation of burrows which facilitate water and gas transport incorporation of litter into soil mixing of soil minerals organic materials and breaking down of soil organic matter ejection of surface and or subsurface casts earthworms have positive effects on the soil fabric and on the decomposition and mineralization of litter by breaking down organic matter and producing large amounts of faeces thereby mixing litter with the mineral soil therefore they play an important part humus form changes according to the patterns of plant communities succession consequently they are also good bio indicators for soil and site quality and are thus useful when planning ecosystem function improvements earthworm s populations are indicators in degraded regions and in soil reclamations aristotle called them intestines of the earth and the eminent nineteenth century biologist charles darwin spent many years observing their major influence on humus formation and soil transport however the links between their impacts on the soil environment and the resulting modification of natural selection pressures on engineers as well as on other organisms have received little attention based on papers recently published in the science journal phillips et al 2019 document an impressive group effort by 141 researchers from 35 countries to develop a global scale atlas of earthworms in addition fierer 2019 described the earthworms place on earth so darwin s legacy continues despite the vast increase in scientific literature on earthworms in recent years much remains to be known of their basic biology ecology and functioning in this book we summarized the current knowledge in relation to ecological processes involved with earthworms in croplands rangelands forests and urban soils

this book covers virtually all aspects of image formation in medical imaging including systems based on ionizing radiation x rays gamma rays and non ionizing techniques ultrasound optical thermal magnetic resonance and magnetic particle imaging alike in addition it discusses the development and application of computer aided detection and diagnosis cad systems in medical imaging also there will be a special track on computer aided diagnosis on covid 19 by ct and x rays images given its coverage the book provides both a forum and valuable resource for researchers involved in image formation experimental methods image performance segmentation pattern recognition feature extraction classifier design machine learning deep learning radiomics cad workstation design human computer interaction databases and performance evaluation

detection and analysis of sars coronavirus detecting and analyzing the covid 19 pandemic with biosensor technology the highly contagious sars cov 2 pathogen has challenged health systems around the world as they struggle to detect and monitor the spread of the pathogen in detection and analysis of sars coronavirus advanced biosensors for pandemic viruses and related pathogens expert chemists chaudhery mustansar hussain and sudheesh k shukla deliver a practical analysis of how contactless coronavirus detectors may be developed using existing biosensor technology the editors outline current challenges in the field the bioanalytical principles for coronavirus detection and available biosensor technology they then move on to how available technology might be adapted to detect coronaviruses and how commercialization of the technology might unfold the lessons learned in this book are readily applicable to the study of other current and emerging pathogens readers will also enjoy a thorough introduction to the current diagnostic approaches for covid 19 including common challenges technology adaptation and future potential an exploration of bio analytical strategies for sars cov 2 covid 19 including covid detection via nanotechnology biosensing approaches and the role of nanotechnology in coronavirus detection practical discussions of biosensors for the analysis of sars cov 2 covid 19 including sensor development for coronavirus and chemical sensors for coronavirus diagnosis in depth treatments of the commercialization and standardization for analytical technologies perfect for virologists pharmaceutical industry professionals and sensor developers detection and analysis of sars coronavirus is also an indispensable resource for those working in analytical research institutes biotechnology industry professionals and public health agency professionals
