how can theory improve our knowledge of writing Raúl Sánchez answers this question by examining dominant theoretical trends in composition studies over the last fifteen years citing their common origins in a narrow representational metatheory of writing he argues that this adherence actually leads the field away from its objects of study writing and the writing subject through this extended critique he elaborates an alternative metatheory one that restores writing to the conceptual center of composition studies by emphasizing its generative rather than its representational characteristics particularly in increasingly networked and textualized cultures

the oxford handbook of music composition pedagogy presents an illuminating collection of philosophy research applied practice and international perspectives to highlight the practices of teaching and learning in the field of music composition the handbook offers various strategies and approaches in composition for teachers music teacher educators and students of music education

at the centre of the traditional discussion of truth is the question of how truth is defined recent research especially with the development of deflationist accounts of truth has tended to take truth as an undefined primitive notion governed by axioms while the liar paradox and cognate paradoxes pose problems for certain seemingly natural axioms for truth in this book volker halbach examines the most important axiomatizations of truth explores their properties and shows how the logical results impinge on the philosophical topics related to truth in particular he shows that the discussion on topics such as deflationism about truth depends on the solution of the paradoxes his book is an invaluable survey of the logical background to the philosophical discussion of truth and will be indispensable reading for any graduate or professional philosopher in theories of truth

h p grice is a distinguished philosopher predominantly known for his influential contributions to the philosophy of language but that is only one strand in a rich tapestry of ideas bearing on the philosophy of mind ethics and metaphysics as well some of the essays in this collection of original papers by leading philosophers edited by grandy and warner develop grice s earlier work in the philosophy of language but most of them discuss or present his newer and less known work together they demonstrate the unified and powerful character of his thoughts on being mind meaning and morals an introductory essay provides some of the first overview of grice s thought and makes explicit some of the relations among the essays grice s substantial response is followed by nineteen contributed papers whose authors include donald davidson stephen schiffer john searle and p f strawson the times literary supplement writes of grice the only leader of whom it is true that the level of the discipline would be raised if most philosophers took him as a model of how to think and write this paperback edition replaces the hardback published march 1986

the leading edge of computer science research is notoriously ckle new trends come and go with alarming and unfailing regularity in such a rapidly changing eld the fact that research interest in a subject lasts more than a year is worthy of note the fact that after ve years interest not only remains

but actually continues to grow is highly unusual as 1998 marked the fifth birthday of the international workshop on agent theories architectures and languages. It seemed appropriate for the organizers of the original workshop to comment on this remarkable growth and reflect on how the field has developed and matured. The first natural workshop was co-located with the eleventh European conference on artificial intelligence (ECAI 94) which was held in Amsterdam. The fact that we chose an AI conference to co-locate with is telling. At that time we expected most researchers with an interest in agents to come from the AI community. The workshop, which was planned over the summer of 1993, attracted 32 submissions and was attended by 55 people. It was the largest workshop at ECAI 94 and the clear enthusiasm on behalf of the community made the decision to hold another natural workshop simple. The natural 94 proceedings were formally published in January 1995 under the title intelligent agents and included an extensive review article, a glossary, a list of key agent systems and unusually for the proceedings of an academic workshop, a full subject index. The high scientific and production values embodied by the natural 94 proceedings appear to have been recognized by the community and resulted in natural proceedings being the most successful sequence of books published in Springer Verlag's lecture notes in artificial intelligence series.

In recent years there have been a number of books both anthologies and monographs that have focused on the liar paradox and more generally on the semantic paradoxes, either offering proposed treatments to those paradoxes or critically evaluating ones that occupy logical space. At the same time there are a number of people who do great work in philosophy who have various semantic, logical, metaphysical and/or epistemological commitments that suggest that they should say something about the liar paradox, yet who have said very little, if anything, about that paradox or about the extant projects involving it. The purpose of this volume is to afford those philosophers the opportunity to address what might be described as reflections on the liar.

Publishing in Rhetoric and Composition is a collection of essays about the politics and practices of generating scholarship in rhetoric and composition. The contributors to this book, many of whom are current or past editors of the discipline's most prestigious scholarly journals, undoubtedly have their finger on the pulse of composition's most current scholarship and offer invaluable insight into the production and publication of original research. They discuss publishing articles and reviews as well as book-length projects including scholarly monographs, edited collections and textbooks. They also address such topics as how composition research is valued in English departments, recent developments in electronic publishing, the work habits of successful academic writers and the complications of mentoring graduate students in a publish-or-perish profession. An inviting and helpful tone makes this an ideal textbook for research methodology and professional writing courses.

this work presents a procedural account of the so called projection problem for presupposition it is assumed that presuppositions embedded in complex sentences are subject to no projection rules or ad hoc conditions whatever but are in fact satisfied in appropriate contexts in a completely uniform way it is demonstrated that the apparent filtering alteration or preservation of an embedded presupposition is in every case a logical consequence of a general independently motivated model of language processing and knowledge representation it is shown in detail that turning the projection problem upside down in this way leads to a far more explanatory and descriptively adequate account than any previously proposed

a counter history of composition contests the foundational disciplinary assumption that vitalism and contemporary rhetoric represent opposing disconnected poles in the writing tradition vitalism has been historically linked to expressivism and concurrently dismissed as innate intuitive and unteachable whereas rhetoric is seen as a rational teachable method for producing argumentative texts counter to this byron hawk identifies vitalism as the ground for producing rhetorical texts the product of complex material relations rather than the product of chance through insightful historical analysis ranging from classical greek rhetoric to contemporary complexity theory hawk defines three forms of vitalism oppositional investigative and complex and argues for their application in the environments where students write and think today hawk proposes that complex vitalism will prove a useful tool in formulating post dialectical pedagogies most notably in the context of emerging digital media he relates two specific examples of applying complex vitalism in the classroom and calls for the reexamination and reinvention of current self limiting pedagogies to incorporate vitalism and complexity theory
