in reading word frequency is commonly regarded as the major bottom up determinant for the speed of lexical access moreover language processing depends on top down information such as the predictability of a word from a previous context yet however the exact role of top down predictions in visual word recognition is poorly understood they may rapidly affect lexical processes or alternatively influence only late post lexical stages to add evidence about the nature of top down processes and their relation to bottom up information in the timeline of word recognition we examined influences of frequency and predictability on event related potentials erps in several sentence reading studies the results were related to eye movements from natural reading as well as to models of word recognition as a first and major finding interactions of frequency and predictability on erp amplitudes consistently revealed top down influences on lexical levels of word processing chapters 2 and 4 second frequency and predictability mediated relations between n400 amplitudes and fixation durations pointing to their sensitivity to a common stage of word recognition further larger n400 amplitudes entailed longer fixation durations on the next word a result providing evidence for ongoing processing beyond a fixation chapter 3 third influences of presentation rate on erp frequency and predictability effects demonstrate available for word processing critically co determines the course of bottom up and top down influences chapter 4 fourth at a normal reading speed an early predictability effect suggested the rapid comparison of top down hypotheses with the actual visual input chapter 5 the present results are compatible with interactive models of word recognition assuming that early lexical processes depend on the concerted impact of bottom up and top down information we offered a framework that reconciles the findings on a timeline of word recognition taking into account influences of frequency predictability and presentation rate chapter 4

written by an international team of leading experts in neuroscience this book presents an overview of some of the main schools of thought as well as current research trends in neuroscience it focuses on neural top down causation applied to hot topics like

consciousness emotions the self and the will action and behavior neural networks brains and society a special feature of the book is pertinent presentations and lively discussions on the topic the book provides the reader with invaluable information on what the latest research is in this field and will enable the reader to gain considerable amount of knowledge as well as hints for further enquiry this is the first book on the topic of neuroscience and top down causation and is written at a level that will interest both academics and the general readers the extensive and lively discussions included in the book offer the reader a clear idea of the research in this field and what will emerge as the main trends

in its latest assessment report the intergovernmental panel on climate change ipcc 2007 projects that without further action the global average surface temperature would rise by a further 1.8-4.0 c until the end of this century but even if the rise in temperature could be limited to the lower end of this range irreversible and possibly catastrophic changes are likely to occur consequently the protection of the earth's atmosphere requires substantial efforts to reduce co₂ and other greenhouse gas emissions especially countries with very high per capita emissions to limit the imminent rise in temperature in the kyoto protocol the european union has committed itself to reducing the emissions of greenhouse gases by 8% up to 2008-2012 compared to 1990 levels within the eu burden sharing agreement some countries have to achieve even higher emissions reductions germany was assigned a reduction target of 21% the entry into force of the kyoto protocol in february 2005 marks a first step towards meeting global climate targets but more ambitious action to reduce greenhouse gas emissions is needed after 2012 when the kyoto targets expire under german presidency the eu has committed itself to unilaterally reduce its greenhouse gas emissions until 2020 by 20% in case a post kyoto agreement can be reached the eu reduction target would be 30% ceu 2007

mental imagery philosophy psychology neuroscience is about mental imagery and the important work it does in our mental life it plays a crucial role in the vast majority of our perceptual episodes it also helps us understand many of the most puzzling features of perception like the way it is influenced in a top down manner and the way different sense modalities interact but mental imagery also plays a very important role in emotions action execution and even in our desires in sum there are very few mental phenomena

that mental imagery doesn't show up in in some way or other the hope is that if we understand what mental imagery is how it works and how it is related to other mental phenomena we can make real progress on a number of important questions about the mind this book is written for an interdisciplinary audience as it aims to combine philosophy psychology and neuroscience to understand mental imagery the author has not presupposed any prior knowledge in any of these disciplines so any reader can follow the arguments

change is a powerful force but one that must be directed if it is to have a positive and calculated outcome it can be shaped according to the needs of an organisation to grow or contract respond to competition or threat or simply to keep pace with the world around it it is widely understood by leaders and managers that only effective project management has the potential to deliver the transformation they seek however many projects have failed to deliver the outcomes that their sponsors anticipated too many have produced apps buildings processes products and services that remain on the shelf unadopted and a costly reminder that projects are vehicles that can just as easily deliver failure as success the revised and expanded third edition of this much admired guide explains the principles and techniques of change and project management with its clear structured approach it is an invaluable handbook for helping leaders and managers to be sufficiently informed equipped and confident to use projects to deliver change and to realise its benefits

some of the best vision scientists in the world in their respective fields have contributed to chapters in this book they have expertise in a wide variety of fields including bioengineering basic and clinical visual science medicine neurophysiology optometry and psychology their combined efforts have resulted in a high quality book that covers modeling and quantitative analysis of optical neurosensory oculomotor perceptual and clinical systems it includes only those techniques and models that have such fundamentally strong physiological control system and perceptual bases that they will serve as foundations for models and analysis techniques in the future the book is aimed first towards seniors and beginning graduate students in biomedical engineering neurophysiology optometry and psychology who will gain a broad understanding of quantitative analysis of the visual system in addition it has sufficient depth in each area to be useful as an updated reference and tutorial for graduate and post doctoral students as well as general vision scientists

the cognitive science of religion is a relatively new academic field in the study of the origins and causes of religious belief and behaviour the focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs however many theologians and religious scholars are concerned that this perspective will reduce and replace

explanations based in religious traditions beliefs and values this book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion

in science a few areas particularly capture the imagination because of a combination of excitement substantial technical progress and implicit significance in affecting the nature and quality of life perhaps no area of science exhibits these characteristics more abundantly than that dealing with the brain once shrouded in the mystical studies in modern brain science are dramatically enhancing our understanding of brain function and its impact on learning and memory it is perhaps the union of pragmatic and mystical aspects that makes this such an exciting arena of science the office of naval research onr began an intensive effort in 1983 on the topic of the neural basis for learning and memory this effort was aimed at providing the scientific understanding of how learning takes place it is the expectation that a neurological understanding of learning processes will lead to the formulation of learning strategies that will significantly enhance performance this is important in a civilian and military population faced with serious manpower problems requiring a few individuals to be more expert with technologically intensive systems with these motivations in mind two of us ejw and rn formulated a full day symposium at the aaas annual meeting held in new york may 1984

this book discusses the current trends in and applications of artificial intelligence research in intelligent systems including the proceedings of the artificial intelligence methods in intelligent algorithms section of the 8th computer science on line conference 2019 csoc 2019 held in april 2019 it features papers on neural networks algorithms optimisation algorithms and real world issues related to the application of artificial methods

citizens assemblies cas are flourishing around the world quite often composed of randomly selected citizens cas arguably come as a possible answer to contemporary democratic challenges democracies worldwide are indeed confronted with a series of disruptive phenomena such as a widespread perception of distrust and growing polarization as well as low performance many actors seek to

reinvigorate democracy with citizen participation and deliberation cas are expected to have the potential to meet this twofold objective but despite deliberative and inclusive qualities of cas many questions remain open the increasing popularity of cas call for a holistic reflection and evaluation on their origins current uses and future directions the de gruyter handbook of citizens assemblies showcases the state of the art around the study of cas and opens novel perspectives informed by multidisciplinary research and renewed thinking about deliberative participatory processes it discusses the latest theoretical empirical and methodological scientific developments on cas and offers a unique resource for scholars decision makers practitioners and curious citizens to better understand the qualities purposes promises but also pitfalls of cas

scientific research is often influenced by financial interests political interests or personal career interests of the scientists involved for instance the pharmaceutical giant merck manipulated clinical trial data in order to make sure that data confirmed the safety of one of its products viox in order to serve the company s short term commercial interests this case is obviously unacceptable but why exactly is it unacceptable one way to account for this judgment is on the basis of the ideal of purity according to this ideal scientific decision making should be pure that is unaffected by financial interests political interests career interests and so on although this ideal is questionable many people including philosophers of science still hold on to it in interests and epistemic integrity in science a new framework to assess interest influences in scientific research processes jan de winter first argues that it is better to fully abandon the ideal of purity then proposes an alternative ideal to assess interest influences in science the ideal of epistemic integrity he spells out and systematically defends a new concept of epistemic integrity using it not only to analyze the viox debacle but also to identify unacceptable interest influences in aerospace science climate science and biology and to explain exactly why these interest influences are unacceptable these analyses make a compelling case for the new concept of epistemic integrity which will be interesting and useful for philosophers of science scientists engineers science policymakers and anyone else concerned about the integrity of science

autodesk inventor was introduced in 1999 as an ambitious 3d parametric modeler based not on the familiar autocad programming

architecture but instead on a separate foundation that would provide the room needed to grow into the fully featured modeler it now is almost a decade later inventor 2009 marks a change of focus in the development of inventor from an up and coming application to the current release with the inclusion of the design accelerator wizards and with refined core functions the maturity of the inventor tools happily coincides with the advancement of the cad market s adoption of 3d parametric modelers a design tool and although it is important to understand that 2d cad will likely never completely disappear manufacturing design departments 3d design will increasingly become a requirement for most with this in mind we have set out to fill the following pages with detailed information on the specifics of the tools while addressing the principles of sound parametric design techniques
