this book deals with the development of modality from a crosslinguistic perspective and is closely related to two earlier volumes on the development of verb and nominal inflection in first language acquisition sola 21 and 30 both methodologically and theoretically each of the fourteen contributions studies the early development of the form and function of expressions of deontic and dynamic agent oriented modality or epistemic and evidential propositional modality in one of fourteen languages belonging to different morphological types and language families seven indo european and seven non indo european the analyses are mainly based on longitudinal observations of children in their 2nd and 3rd years of life in conversational interaction with their caregivers mostly the mothers main issues addressed are the development of directives and modulations of information in terms of certainty and evidentiality also taking into account children s developing social pragmatic and cognitive skills one of the main findings is that agent oriented and propositional modality may develop in parallel depending on the typological characteristics of the language acquired the decisive factor is whether notions of propositional modality are grammaticized and obligatorily expressed in the language the findings are interpreted within non nativist theoretical frameworks usage based theories natural morphology

argument marking morphological partitives have been the topic of language specific studies while no cross linguistic or typological analyses have been conducted since individual partitives of different languages have been studied there exists a basis for a more cross linguistic approach the purpose of this book is to fill the gap and to bring

together research on partitives in different languages

this book deals with the emergence of nominal morphology from a cross linguistic perspective and is closely related to development of verb inflection in first language acquisition ed by d bittner w u dressler m kilani schoch both methodologically and theoretically each of the fourteen contributions studies the early development of the fundamental inflectionally expressed categories of the noun number case gender in one of the languages belonging to different morphological types isolating fusional inflecting agglutinating root inflecting and families germanic romance slavic baltic greek finnic turc semitic indian american the analyses are based on parallel longitudinal observations of children in their second and early third year of life as well as their input the focus lies on the transition from a pre morphological to a proto morphological stage in which grammatical oppositions and so called mini paradigms begin to develop the point at which children start to discover the morphological structure of their language and the speed with which they develop inflectional distinctions of lexical items has been found to be dependent on the morphological richness of the input language on the paradigmatic as well as the syntagmatic axis of linguistic structure the findings are interpreted within non nativist theoretical frameworks natural morphology usage based theories

the chapters of this volume scrutinize the interplay of different combinations of case animacy and semantic roles thus contributing to our understanding of these notions in a novel way the focus of the chapters lies on showing how animacy affects argument marking unlike previous studies these chapters primarily deal with lesser studied phenomena such as animacy effects on spatial cases and the differences between cases and adpositions in the coding of spatial relations in addition theoretical and diachronic issues related to case and semantic roles are also discussed for example what is case how do cases develop and what are the functional differences between cases and adpositions the chapters deal with a variety of different languages including uralic languages indo european languages basque korean and vaeakau taumako the book is appealing to anyone interested in case animacy and or semantic roles

this book contains papers from the fourth international conference on human language technologies the baltic perspective baltic hlt 2010 held in riga in october 2010 this conference is the latest in a series which provides a forum for sharing recent advances in human language processing and promotes cooperation between the computer

science and linguistics communities of the baltic countries and the rest of the world bringing together scientists developers providers and users the conference is an opportunity to exchange information discuss problems find new synergies and promote i

the volume summarizes research on the structural convergence and divergence of languages in the eastern part of the circum baltic area by providing its profile against a genealogical and typological background methodological issues needed to assess factors that condition convergence in contact superposition zones or that otherwise lead to differentiation among related varieties are discussed against this backdrop synthetic surveys of major and minor finnic languages are provided followed by corpus based case studies on morphosyntactic phenomena the volume thus presents both a synthetic compendium and a series of specific up to date studies with special attention to micro variation

passives middles and other voice phenomena are issues at the core of modern linguistic research this volume brings together different perspectives on voice different theoretical viewpoints different languages and different kinds of voice phenomena the eleven articles each make a valuable contribution to the ongoing discussion offering new data new analyses and bringing new light to long standing issues in combination they present a multi faceted and yet coherent picture of the topics at hand

discourse markers and modal particles are fuzzy linguistic categories that are difficult to describe the contributions in this volume go beyond this statement they discuss the intersection between modal particles and discourse markers and examine whether or not it is possible to draw a line between these two types of linguistic expressions on the basis of new synchronic and diachronic data from speech and writing from european and asian languages or cross linguistically the authors answer the question whether discourse markers and modal particles are distinct categories whether they form a cline or whether modal particles are a subcategory of discourse markers this common question shows up throughout all chapters which makes the book to a coherent whole by disentangling the complexity of categorizing multifunctional expressions this book also sheds new light on the processes of meaning extension the traditional discourse and modal functions are complemented by interactional and textual ones a must read for functional linguists

this pioneering research brings a new insight into derivational processes in terms of theory method and typology theoretically it conceives of derivation as a three dimensional system methodologically it introduces a range of parameters for the evaluation of derivational networks including the derivational role combinability and blocking effects of semantic categories the maximum derivational potential and its actualization in relation to simple underived words and the maximum and average number of orders of derivation each language specific chapter has a unified structure which made it possible to identify in the final typologically oriented chapter the systematicity and regularity in developing derivational networks in a sample of forty european languages and in a few language genera and families this is supported by considerations about the role of word classes morphological types and the differences and similarities between word formation processes of the languages belonging to the same genus family

anna verschik offers a new perspective on how a previously monolingual community of russian speakers in estonia is rapidly becoming bilingual after the end of the soviet occupation in 1991 the contact induced change in russian under the growing impact of estonian is analysed in the theoretical framework of code copying changes in linguistic behaviour of the speakers are often a result of intentional cultivation of non monolingual communication strategies and language policies and go hand in hand with the development of a new identity estonian russians emerging bilingual speech is a fascinating study that will be of interest to researchers studying language contact language change and bilingualism

while much attention has been devoted to simple nominal relators especially prepositions and case markers complex nominal relators have not yet been the focus of a systematic and cross linguistic study the chapters of this volume provide not only a working definition of such constructions but also a description of complex adpositions and other complex nominal relators in a variety of european languages both indo european and non indo european including some languages for which this phenomenon had received little attention such as breton and albanian building on synchronic and diachronic corpus based investigations the authors show commonalities and specificities of these linguistic items across languages trying to explain why and how they emerged the research presented in this volume confirms the wide spread use of complex adpositions in europe and the data reviewed in the final discussion suggests it might be the same in other parts of the world as well this book thus offers not only detailed descriptions of complex nominal relators in fifteen languages but also indications of what to look for in other languages and how to distinguish between a syntactically free sequence and a genuine complex nominal relator

this volume analyzes constructions with non canonical subjects in individual languages and cross linguistically drawing on insights from cognitive and discourse functional linguistics prototypical subjects have often been characterized in terms of their semantic syntactic and discourse features such as animacy agentivity topicality referentiality definiteness and autonomy of existence of the subject referent a non canonical subject is one that lacks some of these features this may be reflected in its meaning grammatical coding and or discourse function in discussing non canonical subjects in individual languages and cross linguistically the chapters in the volume address the following more general topics what kinds of grammatical semantic and discourse criteria can be used to distinguish subjects from non subjects to what extent are subject criteria construction specific what kinds of constructions have non canonical subjects what are the semantic and discourse functions of constructions with non canonical subjects are subjects which are grammatically non canonical also atypical in terms of their discourse features

in recent years we have witnessed on the one hand an increased interest in cross linguistic data in formal semantic studies and on the other hand an increased concern for semantic issues in language typology however only few studies combine semantic and typological research for a particular semantic domain such as the papers in bach et al 1995 on quantification and smith 1997 on aspect this book brings together formal semanticists with a cross linguistic perspective and or those working on lesser known languages and typologists interested in semantic theory to discuss semantic variation in the specific domain of tense aspect and mood modality

research into the grammar of language death is often biased toward formal processes e g paradigmatic levelling in this study the author changes the perspective and shows that the relative susceptibility of linguistic elements to loss change and innovation in language death circumstances can be dependent on meaning and thus organized along semantic notions rather than along structure

this book offers a survey of current work in nordic and general linguistics with a special focus on language contact the papers in this book were presented at the 11th international conference of nordic and general linguistics icngl in freiburg the icngl conference series aims to facilitate the exchange of ideas on scandinavian and other languages between researchers from the nordic countries and elsewhere the present volume focuses on language contact which has always been a topic of great interest in nordic linguistics additionally the contributions in this book address

issues of phonology morpho syntax syntax and grammaticalization the book is meant to be a snapshot of nordic linguistics as it is practiced today reflecting at the same time its established research traditions as well as its forages into new methodologies and theories

this volume advances our understanding of two highly debated aspects of grammaticalization its relation to inter subjectification and its directionality these aspects are studied with respect to such phenomena as auxiliaries discourse markers conjunctions prepositions and pronouns bringing together a wide range of languages the collection provides insight into the crucial dimensions of grammaticalization research

this volume offers a thorough systematic and crosslinguistic account of evidentiality the linguistic encoding of the source of information on which a statement is based in some languages the speaker always has to specify this source for example whether they saw the event heard it inferred it based on visual evidence or common sense or was told about it by someone else while not all languages have obligatory marking of this type every language has ways of referring to information source and associated epistemological meanings the continuum of epistemological expressions covers a range of devices from the lexical means in familiar european languages and in many languages of aboriginal australia to the highly grammaticalized systems in amazonia or north america in this handbook experts from a variety of fields explore topics such as the relationship between evidentials and epistemic modality contact induced changes in evidential systems the acquisition of evidentials and formal semantic theories of evidentiality the book also contains detailed case studies of evidentiality in language families across the world including algonquian korean nakh dagestanian nambikwara turkic uralic and uto aztecan
