is there a future for the law in this book florian grisel addresses one of the most fascinating questions raised by social scientists in the past few decades since the 1980s socio legal scholars have argued that governance based on social norms or private governance can offer an alternative to regulation by the law on this account private governance could be socially efficient and even optimal compared with other modes of governance the limits of private governance supplements this optimistic analysis of private governance by assessing the long term evolution of a private order in the fishery of marseille in the last eight centuries the fishers of marseille have regulated their community without apparent means of legal support from the french state in the early 15th century they even created an organisation called the prud homie de pêche in order to regulate their fishery based on archival evidence interviews and ethnographic data grisel examines the evolution of the prud homie de pêche and argues that the strong social norms in which it is embedded are not only powerful tools of governance but also forces of inertia that have constrained its regulatory action the lessons drawn from this book will appeal to academics policy makers and members of the general public who have an interest in the governance of our modern societies
