neutroalgebra and antialgebra were extended to neutrogeometry and antigeometry in order to catch the non euclidean geometries in the real world the spaces and the elements that populate them and the rules that apply to them are not perfect uniform homogeneous or complete they are fragmentary and disparate with unclear and conflicting information and they do not apply in the same degree to each element therefore these partial hybrid and mixed structures are necessary neutrogeometry neutroalgebra and superhyperalgebra in today s world presents applications of many neutrostructures in our real world and considers neutrogeometry and antigeometry as new fields of research that resemble everyday life covering key topics such as hyperbolic geometry elliptic geometry and antigeometry this reference work is ideal for mathematicians industry professionals researchers scholars academicians practitioners instructors and students

this edited volume explores the previously underacknowledged pre history of mathematical structuralism showing that structuralism has deep roots in the history of modern mathematics the contributors explore this history along two distinct but interconnected dimensions first they reconsider the methodological contributions of major figures in the history of mathematics second they re examine a range of philosophical reflections from mathematically inclined philosophers like russell carnap and quine whose work led to profound conclusions about logical epistemological and metaphysical aspects of structuralism

in china lots of excellent maths students take an active part in various maths contests and the best six senior high school students will be selected to form the imo national team to compete in the
