what is it to be scientific is there such a thing as scientific method and if so how might such methods be justified robert nola and howard sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method although for many scientists their understanding of method is something they just pick up

in the course of being trained nola and sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery they robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated this book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction ibe and hypothetico deductivism part 3 introduces probabilistic modes of reasoning particularly bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as popper lakatos kuhn and feyerabend and part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as quine laudan and rescher this book offers readers a comprehensive introduction to the idea of scientific method and a wide ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years

as official sponsors of the first international conference in the history and philosophy of science the two divisions of the international union of the history and philosophy of science owe a great deal to the university of jyvlskyla and the 1973 jyvlskylly summer festival for the extra ordinarily generous hospitality they provided but there is an additional debt owed not simply for the locale but for the very substance of the conference to the two finnish scholars who have jointly authored the present volume for this volume represents not only the first part of the published proceedings of this first international conference in the history and philosophy of science but also most fittingly the paper that opened the conference itself yet the appropriateness of the paper from which this book has resulted opening the conference lies far less in the fact that it was a contribution by two finnish authors to a meeting hosted in finland than it does to the fact that this paper and now the present book comes to grips in an extreme ly direct way with the very problem the whole conference was from the outset designed to treat generally put this problem was to bring to gether a number of historians and philosophers of science whose contrib uted papers would bear witness to the ways in which the two disciplines can be and are of value to each other
