human beings have wondered about the stars since the dawn of the species does life exist out there intelligent life even or are we alone the  
quest for life in the universe touches on fundamental hopes and fears it touches on the essence of what it means to formulate a theory grasp a  
concept and have an imagination this book traces the history of the science of this area and the development of new schools in philosophy its  
essays seek to establish the history and philosophy of astrobiology as research fields in their own right by addressing cognitive linguistic  
epistemological ethical cultural societal and historical perspectives on astrobiology the book is divided into three sections the first cognition  
focuses on the human mind and what it contributes to the search for life it explores the emergence and evolution of terrestrial life and  
cognition and the challenges humans face as they reach to the stars the essays raise philosophical questions pose ethical dilemmas and offer  
a variety of approaches including one from cognitive zoology in formulating a theory of the universal principles of intelligence the limits of  
human conceptual abilities and the human mind's encounter with the unknown the second section communication examines the linguistic and

semiotic requirements for interstellar communication what is needed for successful communication are there universal rules for success what are the possible features and limitations of exolanguages what is required for recognizing a message as a message the third section culture considers cultural and societal issues it explores astrobiology s organization as a scientific discipline its responsibilities to the public sphere and its theological implications it reviews the historically important panspermia hypothesis along with the popularization of astrobiology and its ongoing institutionalisation through addressing these questions we take our first steps in exploring the immense terra incognita of extraterrestrial life and the human mind

the name dggtb deutsche gesellschaft für geschichte und theorie der biologie german society for the history and theory of biology reflects recent history as well as german tradition the society is a relatively late addition to a series of german societies of science and medicine that began with the deutsche gesellschaft für geschichte der medizin und der naturwissenschaften founded in 1910 by leipzig university s karl sudhoff 1853 1938 who wrote we want to establish a german society in order to gather german speaking historians together in our special

disciplines so that they form the core of an international society yet sudhoff at this time of burgeoning academic internationalism was quite willing to accommodate the wishes of a number of founding members and drop the word german in the title of the society and have it merge with an international society the founding and naming of the society at that time derived from a specific set of historical circumstances and the same was true some 80 years later when in 1991 in the wake of german reunification the deutsche gesellschaft für geschichte und theorie der biologie was founded from the start the society has been committed to bringing studies in the history and philosophy of biology to a wide audience using for this purpose its jahrbuch für geschichte und theorie der biologie parallel to the jahrbuch the verhandlungen zur geschichte und theorie der biologie has become the by now traditional medium for the publication of papers delivered at the society s annual meetings in 2005 the jahrbuch was renamed annals of the history and philosophy of biology reflecting the society s internationalist aspirations in addressing comparative biology as a subject of historical and philosophical studies
