this volume contains the proceedings of the 8th international information security conference isc 2005 which took place in singapore from 20th to 23rd september 2005 isc 2005 brought together individuals from academia and industry involved in many research disciplines of information security to foster the exchange of ideas during recent years this conference has tried to place special emphasis on the practical aspects of information security and since it passed from being an international workshop to being an international conference in 2001 it has become one of the most relevant forums at which researchers meet and discuss emerging security challenges and solutions advised by the isc steering committee and in order to provide students with more opportunities for publication isc 2005 accepted extra student papers besides the regular papers the initiative was very well accepted by the young sector of the scientific community and we hope that the success of this idea will remain for next events another important factor for the success of isc 2005 was that selected papers in the proceedings will be invited for submission to a special issue of the international journal of information security the result was an incredible response to the call for papers we received 271 submissions the highest since isc events started it goes without saying that the paper selection process was more competitive and difficult than ever before only 33 regular papers were accepted plus 5 student papers for a special student session

understanding the mechanism of a socio economic system requires more than an understanding of the individuals that comprise the system it also requires understanding how individuals interact with each other and how the aggregated outcome can be more than the sum of individual behaviors this book contains the papers fostering the formation of an active multi disciplinary community on socio economic systems with the exciting new fields of agent based modeling and econophysics we especially intend to increase the awareness of researchers in many fields with sharing the common view many economic and social activities as collectives of a large scale heterogeneous and interacting agents economists seek to understand not only how individuals behave but also how the interaction of many individuals leads to complex outcomes agent based modeling is a method for studying socio economic systems exhibiting the following two properties 1 the system is composed of interacting agents and 2 the system exhibits emergent properties that is properties arising from the interactions of the agents that cannot be deduced simply by aggregating the properties of the system's components when the interaction of the agents is contingent on past experience and especially when the agents continually adapt to that experience mathematical analysis is typically very limited in its ability to derive the outcome
