occupational safety and health management theory is now rightly focused on pro activity risk assessment and management but it remains important that organizations know what they need to do when accidents happen both to comply with legislation and to extract all the information

from the incident to improve their health and safety management. Tolley's Workplace Accident Handbook presents in a single volume what needs to be done when an accident occurs from emergency procedures and legal reporting requirements through to formal investigations and possible legal proceedings. In this new edition, chapters on first aid and accident investigation reports have been added and the rehabilitation chapter has been updated to cover the latest insurance industry initiatives. The handbook also shows how to learn from the accident data gathered and how to implement recommendations into a company's health and safety management system. The text is supported by checklists, case studies and ready-to-use forms and templates. Health and safety practitioners in all industries will find this handbook is packed full of practical and legal advice. It will also be of use to lawyers dealing with accident claims, insurance risk managers, emergency planning, first aid and enforcement officers as well as to students on health and safety and specialist accident investigation courses. Mark Tyler is a chartered safety and health practitioner and a leading solicitor in the area of health and safety law who has worked on numerous high profile cases such as rail crashes and legionnaires disease. His expertise is supplemented with the practical knowledge of other experts in their individual subject areas.

To maintain quality in research output providing the necessary new knowledge for our developing industries must be of prime importance to our community. This is an extremely difficult task when viewed in the context of the rapid rate of change being experienced within our national industrial scene. Collaborative research programmes designed to constantly monitor and improve the quality of output through regular reporting and assessment of achieved goals against defined targets can help the growth of our industry and benefit the rest of society. The government has established initiatives to encourage collaboration and the transfer of technology between the research and development domains. There are many signs that industry and the universities are making a concerted effort to adapt their working practices and relationships to meet the rapidly changing industrial environment. There are still many shortfalls and areas for improvement. Some of the extremes of government educational policy can and will seriously impair the evolution of and benefits gained from the collaboration initiatives. These must be resisted by academia and industry alike if we are to make new advances against foreign competition. Joint R and D projects do work and can be made to work to achieve the steady growth of healthy and fruitful relationships. They must however be given a
