it are controlled in the large by changes in the behavioural factors that drive the wage price spiral and the financial markets such behavioural changes can in fact be observed in actual economies in the interaction of demand driven business fluctuations with supply driven wage and price dynamics as they originate from the conflict over income distribution between capital and labour the book is a detailed critique of us mainstream macroeconomics and uses rigorous dynamic macro models of a descriptive and applicable nature it will be of particular relevance to postgraduate students and researchers interested in disequilibrium processes real wage feedback channels financial markets and portfolio choice financial accelerator mechanisms and monetary policy

labour economics have received less attention in macroeconomics despite the fact that

involuntary unemployment is a pressing policy issue here the imbalance is redressed by focusing on labour demand and labour supply relationships

in the first part of this book we treat interacting and small open economies we do this from an historical perspective starting from the classical model of the gold standard and the specie flow mechanism and aim to show there that the dornbusch is lm pc approach with or without rational expectations can still be considered as a if not the core contribution to contemporaneous open economy macrodynamics also on the level of structural macroeconometric model building in the second part we then extend this analysis to the incorporation of more disequilibrium on the real markets prominent further feedback channels of the macrodynamic literature and integrated macromodel building we start from the closed economy consider large open economies in a fixed exchange rate system small open economies subject to high capital mobility and finally two large interacting economies like the usa and euroland our macrofounded approach extends and integrates non market clearing traditions to macrodynamics and can be usefully compared with the new keynesian approaches which are generally rigorously microfounded but often much more limited in scope in capturing full market and agent interactions

the 1970s were a pivotal decade for the us economy deindustrialization broke the power of the labor unions and made possible the redistribution of income in favor of corporate profits globalization and offshore investments opened alternatives to domestic nonfinancial capital accumulation domestic productivity growth declined and labor saving technology empowered superstar corporations to rapidly gain market share this book argues that the persistent fall in profitability leading to the stagflation crisis was a direct result of the transition from the fordist phase of capital accumulation based on large scale manufacturing to the neoliberal phase and the rising power of finance neoliberalism restored the power of rentiers but not the profit rates of nonfinancial corporations falling accumulation rates weakened the growth capacity of nonfinancial corporate firms and secular stagnation became the norm neo keynesian economists larry summers and paul krugman explained the persistence of secular stagnation with arguments borrowed from alvin hansen in the 1930s such as the declining birth rate or the falling relative prices of investment goods hence a shortfall of demand in the classical paradigm profitability drives capital accumulation and falling profitability slows down growth as the accumulation rate declined and the capacity growth diminished breakdowns in supply links due to the covid 19 pandemic prevented large infusions of purchasing power to find matching levels of supply hence the stagflation crisis returned the book will be a great asset to researchers and scholars interested in the development of classical political economy concerning issues related to inflation stagnation growing inequality and the next phase of neoliberalism
