Prehistoric Agriculture is a volume of the proceedings of the 11th international conference of the international council for archaeozoology (ICAZ) which was held in Paris, France, 23rd-28th August 2010. The book is edited by Graeme Barker and is published by the British Archaeological Association. It contains 28 chapters, each written by a different contributor, and covers a wide range of topics related to prehistoric agriculture. The book is available in paperback and hardcover formats, and also as an e-book (epub).

The twenty-eight contributors to this book show how experimental and ethnographic approaches are being used to shed new light on the process of domestication and harvesting techniques, tools and technology in the period just before and just after the appearance of agriculture. The book takes an explicitly comparative approach with chapters on SW Asia, Europe, Australia and Africa.

Discusses agricultural technology in various cultures from the Stone Age to 476 AD, including China, Egypt, Mesoamerica and Greece.

The Agricultural Revolution in Prehistory addresses one of the most debated and least understood revolutions in the history of our species: the change from hunting and gathering to farming. Graeme Barker takes a global view and integrates a massive array of information from archaeology and many other disciplines, including anthropology, botany, climatology, genetics, linguistics and zoology, against current orthodoxy. Barker develops a strong case for the development of agricultural systems in many areas as transformations in the life ways of the indigenous forager societies and argues that these were as much changes in social norms and ideologies as in ways of obtaining food. With a large number of helpful line drawings and photographs, as well as a comprehensive bibliography, this authoritative study will appeal to a wide general readership.
