china s continuous rapid economic growth since the reform and opening up of the country in the early 1980s has been praised as a miracle of the world economy however since 2012 the rate of growth has slowed down rendering

some people pessimistic about the country's economic prospects this title is a collection of a leading Chinese economist's views on China's economic growth and structural reform. The author argues that China's economy has entered the new normal meaning that slowed growth rate is not a cyclical phenomenon but a change in the stage of economic development. Therefore, there is a need to enact supply-side structural reforms such as improved efficiency of resource reallocation while shifting the mode of development from one of inputs to innovation. In addition, the author discusses the five major concepts of development proposed for the 13th five-year plan as well as some critical topics related to supply-side structural reform such as agricultural development, labor employment, and product quality. Scholars and students of macroeconomics, development economics, and the Chinese economy will find this book to be essential reading.
