a major rewrite of dettmer s classic goldratt s theory of constraints this new edition presents a whole new approach to building and applying logic trees the logical thinking process referred to in the title is nothing less than a broadly applicable systems level approach to policy analysis dettmer has streamlined the process of constructing the logic trees while simultaneously ensuring that the results are more logically sound and closer representations of reality than ever before he explains an easier more logically sound way to integrate current reality trees with evaporating clouds his new version of the thinking process retires the transition tree in favor of the marriage of a more detailed prerequisite tree and critical chain project management this book contains new examples of logic trees from a variety of real world applications most of the diagrams and illustrations are new and improved explanations and procedures for constructing the logic trees are considerably simplified
